Shaikh Jahir Atik

+91 7028401587 jahirshaikh162003@gmail.com github.com/iamjahir09

Professional Summary

Aspiring Software Developer and B.E. (Computer Science & Engineering - AI & ML) student with strong foundations in Core Java, Python, SQL, Object-Oriented Programming, and Machine Learning fundamentals. Skilled in building practical software projects and solving programming problems. Seeking a Software Developer Internship to contribute to real-world software products while continuously enhancing technical expertise.

Education

Anjuman-I-Islam's Kalsekar Technical Campus, New Panvel **Expected 2027**
Bachelor of Engineering (CSE – AI & ML) CGPA: **7.48**

Technical Skills

Programming	Java, Python, SQL
Core CS	Object-Oriented Programming
Machine Learning	Machine learning, Deep Learning, Tensorflow/Keras, Scikit-learn
Currently Learning	Pytorch, Gen AI
Database	SQLite
Tools	Git, GitHub, VS Code, Google Colab, Kaggle

Projects

Lightweight Image Classifier for Edge Devices *Python, TensorFlow/Keras, CNN*

- Built an end-to-end CNN image classification pipeline (26K+ images, 10 classes) targeting deployment on resource-constrained edge devices (AR glasses, wearables).
- Designed and compared a baseline CNN vs. an optimized lightweight CNN (Global Average Pooling), achieving a 134x reduction in model size (12.6 MB $\rightarrow$ 96 KB) to study the accuracy-efficiency tradeoff.
- Addressed class imbalance (3.36x ratio) through targeted data augmentation, after empirically testing and ruling out class-weighting due to training instability; built a reproducible preprocessing pipeline with stratified splitting and EarlyStopping/ModelCheckpoint callbacks.

Airline Reservation System *Core Java*

- Developed a console-based Airline Reservation System using Core Java following OOP principles.
- Implemented Admin and Passenger authentication with dedicated functionalities.
- Built modules for flight search, ticket booking, cancellation, seat availability, fare calculation, and booking history.
- Applied Java Collections, exception handling, and modular class design for maintainable code.

CreditGuard - Loan Default Risk Prediction *Python, Scikit-learn*

- Developed CreditGuard, a machine learning-based loan default risk prediction system to assist banks and financial institutions in evaluating loan applicants.
- Built a Logistic Regression model using historical loan application data to predict whether an applicant is likely to default on a loan.
- Performed data preprocessing, feature engineering, and EDA using Pandas and NumPy to improve model performance.
- Classified applicants into Low, Medium, and High risk categories based on prediction scores to support informed lending decisions.

Key Highlights

- Strong foundation in Core Java, Python, SQL, and Object-Oriented Programming.
- Hands-on experience with Machine Learning fundamentals and software project development.
- Comfortable using Git and GitHub for version control and collaborative workflows.
- Quick learner with a strong interest in backend engineering and software development using AI/ML.
