Professional Summary

Aspiring AI/ML Engineer and B.E. Computer Science & Engineering (AI & ML) student with a strong foundation in Python, Core Java, SQL, Object-Oriented Programming, Machine Learning, and Deep Learning. Experienced in developing practical machine learning and software projects involving data preprocessing, model development, evaluation, and application development. Seeking an AI/ML or Software Developer role to apply problem-solving, programming, and machine learning skills to real-world applications.

Education

Anjuman-I-Islam's Kalsekar Technical Campus, New Panvel **Expected 2027**
Bachelor of Engineering (CSE – AI & ML) CGPA: **7.48**

Technical Skills

Programming	Python, Java, SQL
Machine Learning	Machine Learning, Deep Learning
Core Computer Science	Object-Oriented Programming
Database	SQLite
Tools	Git, GitHub, VS Code, Google Colab, Kaggle

Languages

Hindi, English, Marathi

Projects

Lightweight Image Classifier for Edge Devices

- Built an end-to-end CNN image classification pipeline using 26K+ images across 10 classes, targeting deployment on resource-constrained edge devices such as AR glasses and wearable devices.
- Designed and compared a baseline CNN with an optimized lightweight CNN using Global Average Pooling, achieving a 134x reduction in model size from 12.6 MB to 96 KB.
- Addressed class imbalance using targeted data augmentation and implemented stratified dataset splitting for reliable model evaluation.
- Used EarlyStopping and ModelCheckpoint callbacks to improve training efficiency and retain the best-performing model.

Airline Reservation System

- Developed a console-based Airline Reservation System using Core Java and Object-Oriented Programming principles.
- Implemented Admin and Passenger authentication with separate functionalities for flight and booking management.
- Built modules for flight search, ticket booking, cancellation, seat availability, fare calculation, and booking history.
- Applied Java Collections, exception handling, and modular class design to improve code organization and reliability.

Library Management System

- Developed a full-stack Library Management System using Java, Javalin, MySQL, React, and Vite to manage library operations.
- Implemented role-based authentication for administrators and members, including member registration, login, and protected routes.
- Built book management features allowing administrators to add, update, and delete books, while members can browse and search the book catalogue.
- Implemented book issue and return workflows with automatic updates to book availability and dashboard statistics.
- Developed REST APIs using Javalin and integrated the React frontend with the Java backend for communication.

Projects (Continued)

CreditGuard - Loan Default Risk Prediction

- Developed a machine learning-based loan default prediction system to help evaluate the likelihood of loan default among applicants.
- Built a Logistic Regression model using historical loan application data to predict whether an applicant is likely to default.
- Performed data preprocessing, exploratory data analysis, and feature engineering using Pandas and NumPy.
- Generated risk categories such as Low, Medium, and High based on model prediction scores to support risk assessment.

Key Highlights

- Strong foundation in Python, Core Java, SQL, Object-Oriented Programming, Machine Learning, and Deep Learning.
- Familiar with Git and GitHub for version control, project development, and code management.
- Strong interest in AI/ML engineering, software development, and building practical intelligent applications.
